

ANILINE

Halogination:

NH₂ is highly activating group.

p-Bromoacetanilide

Nitration:

Conc HNO₃ + conc H₂SO₄

* Aniline $\xrightarrow{\text{Acid}}$ Anilinium ion

Sulphonation:

* Aniline will not undergoes F.C Alkylation or Acylation.

HCl + Cu Powder

HBr + "

Na
BF₄

H₂O
3 3

Balz Schiemmer

→ Gattermann

Coupling:

Only at Para Position.

Hoffmann Bromide: $\xrightarrow[\text{KOH}]{\text{Br}_2}$

• One Carbon Less.

Mech:
